

RESORT MANAGEMENT WEBSITE

Team:

MEET SHAH - 1PE17CS084

NIVEDITHA S S PATIL - 1PE17CS098

OMKAR VS - 1PE17CS099

Synopsis:

The resort management website is a website specifically to know details and everything that a customer needs to know regarding the website. The system allows the manager to post available rooms in the hotel. Customers can view and book rooms online. Other hotel services can also be viewed by the customers and can book them too. The system is hence useful for both customers and managers to portably manage the hotel activities.

The customers can contact the hotel through the contact us information displayed and also can check room availability in the resort during their time of stay. Also the customer gets a chance to see the rooms, dining and all the attractions that are needed to get a gist of the resort and other attractions and benefits the resort offers to the customers. This project can be used to specifically market and advertise the resort and also give and display all the necessary information that the customer needs to know of the resort.
